## ***Prompt Payment Parity Legislation Introduced in Alaska Legislature***

*House Bill 133 and Senate Bill 129 address the negative impacts of delayed payments by the State of Alaska to nonprofits, municipalities, and tribal organizations*

ANCHORAGE, March 12, 2025 – Alaska’s nonprofits, municipalities, and tribal organizations provide essential services to Alaskans on behalf of the state. In many cases, where the state has no physical presence, they provide life-saving health care, public safety services, behavioral health support, and more. These non-state partners, however, are too often burdened with delayed payments from the state. These delays, sometimes lasting longer than a year and in amounts upwards of \$1 million, can make doing business with the state unnecessarily difficult.

In a joint announcement today, The Foraker Group and the Alaska Municipal League welcomed the introduction of two companion bills – House Bill 133 introduced by Representative Rebecca Himschoot (I-Sitka) and Senate Bill 129 introduced by Senator Scott Kawasaki (D-Fairbanks) – which will require timely payment by the State of Alaska to nonprofits, municipalities, and tribal organizations receiving state payments through approved grants, contracts, and reimbursements. The bills mirror language in statutes already in place for private for-profit businesses.

“Every day, nonprofits, local governments, and tribal organizations are doing work for Alaskans as part of an agreement with the State of Alaska,” said Foraker President and CEO Laurie Wolf. “The state has entered into these grants, contracts, and reimbursement relationships as our good faith partners, and as such, we want the state to hold up its end of the bargain.”

“Under current law, if you are a private business or contractor working on a public project – for instance, an airport, road, or other infrastructure project – the expectation is that you’ll be paid on time,” said Alaska Municipal League Executive Director Nils Andreassen. “If the payments are late, the state faces penalties and interest, and you can even stop work until payment is received. The reality is that nonprofit, municipalities, and tribal organizations can’t just stop working.”

Both Wolf and Andreassen noted that lack of prompt payment is not a new issue. They emphasized that it has spanned multiple state administrations and requires a concerted and systemwide response. Delayed payments put an unnecessary burden on those delivering important services to Alaskans, and this legislation would bring parity to all organizations that help the state conduct its

work. They agree that this effort ensures effective and efficient use of government resources on behalf of all Alaskans.

“Firsthand reports from the sector show that delays occur in almost every department of our state, which means everything from basic needs, safety, emergency services, childcare, and quality of life programming is at risk,” said Wolf. “Alaska’s contractors and grantees are left to furlough staff or draw from their own savings to subsidize the lack of payment from the state.”

According to recent survey data from The Foraker Group, some organizations have had to pause operations, tap into reserves, pursue lines of credit, or reduce staff until payments were received.

“Foraker and the Alaska Municipal League are proud partners in this legislation,” Andreassen said. “We both issued concurrent resolutions on the impacts of delayed payments last year, and we commend the Rep. Himschoot and Sen. Kawasaki for their commitment to making prompt payment parity the law in Alaska.”
